Welcome to the Atlas pilot

A short guide to get you started. Atlas helps you run your business: clients, invoices, receipts, statements, letters and your books, all on your own computer.

1. Install Atlas

- Atlas works on **Windows** computers. Copy the file **Atlas-Setup-0.1.0.exe** to your computer and double-click it.
- If Windows shows a blue box saying **"Windows protected your PC"**, click **More info**, then **Run anyway**. This is normal for a pilot version that we send to you directly.
- Follow the steps, then open **Atlas** from your desktop or Start menu.

2. The first time you open it

- Atlas opens with a short welcome animation. It plays **only the first time**. Click anywhere to skip it.
- Next comes **Get your access code**. Check your name, company, email and phone (use an email you can open right now), then press **Email me a code**. You need an internet connection for this step.
- Open the email from Atlas, type the **6-digit code** and press **Verify and start**. The code works for 10 minutes. If you cannot see it, check your spam folder.
- Now fill in your **company details**. What you typed in the step before is already filled in, so check it and add the rest: city, address and, if you like, your logo and bank details. They are printed on your invoices, receipts, statements and letters, and you can change them any time in **Settings**.
- You do this **once on each computer**. If you reinstall Atlas or move to another computer, use the same email and you get the same licence and the same end date.
- Read the short welcome card, then press **Get started**.

3. Your first 15 minutes

- Open **Clientele** and add your first client.
- Open **Finance**, press **New document**, and make an invoice or quotation for that client. Open it to see it with your logo and details, then save it as a PDF or send it.
- When the client pays, record the payment so Atlas can issue a money receipt.
- Look at the **Dashboard** to see your figures fill in, and open **Billing** to see statements and reminders.

4. Keep your records safe

Your records are stored **on this computer only**. Nothing is sent anywhere.

Press **Back up now** at the bottom of the left menu often, for example at the end of every working day. Backups and your saved PDFs are kept in the **Atlas_Data** folder on your Desktop. Copy that folder to a flash disk or email it to yourself now and then.

5. About the pilot

- The pilot is **free** and runs for **30 days from the day you enter your code**. Your end date is on the welcome card and in **Settings, About**.
- Atlas quietly checks your licence over the internet about once a week. If your internet is off, Atlas keeps working for up to **14 days**. After that, connect to the internet and press **Try again**.
- A few days before the end, Atlas will remind you. When it ends, Atlas will ask you to make a backup and get in touch with us. **Your records are never deleted.**
- Atlas is still being improved, so something may look odd or not work as you expect. That is exactly what we want to know.

6. Tell us what you think

- Press the **Feedback** button at the top of any page. Give a rating from 1 to 5, tell us what you liked and what was confusing, and send it by email or WhatsApp. It takes one minute.

Need help?

- **The code did not arrive:** check your spam folder and that the email address is right. Wait a minute, then press **Send a new code**. Only the newest code works.
- **"Please connect to the internet":** Atlas has not been able to check your licence for more than 14 days. Connect to the internet and press **Try again**. Your records are safe.
- **"Your licence is paused" or "has ended":** press **Back up my data**, then contact us below. Your records are safe.
